The Varec Biogas 244E Enclosed Burner Systems are designed to burn biogas efficiently and safely over a wide range of operating parameters. With no visible flame, the 244E systems use an innovative stack design to naturally induce the proper amount of combustion air which guarantees high destruction removal efficiency.

The design of the 244E allows for complete combustion of the digester gas or landfill gas. The unique stack design takes advantage of the natural draft properties of the combustion process to draw in the correct amount of air necessary to provide complete combustion. This is all done without the need for motorized dampers and complicated control systems. Independent tests have shown Destruction Removal Efficiencies (DRE) in excess of 99% and low NOx and CO emissions.

The 244E enclosed burner system is not a time and temperature based flare. Its design is constructed to allow combustion air to be naturally inspired and obtain the proper air-gas mixture, thus achieving the optimum operating temperature necessary for complete combustion to occur. The 244E’s innovative combustion stack design eliminates the need for refractory lining and insulation to protect the chamber of high temperatures since cooling air is naturally induced in the stack section openings. This also eliminates the need for heat shields and structures.

The 244E Enclosed Burner System is cost effective and its design makes for easy and reliable operation and maintenance.

**Operation**

Biogas is introduced via venturi nozzle burners to the combustion chamber zones. Gas is introduced into the main burner zone, and secondary burner zones are opened when the gas flow rate and pressure increases.

Air is naturally introduced from the stack base and the gaps between each stack section. The design allows for a natural introduction of air into the combustion process. The required amount of air is induced with the increase in heat release rate resulting in higher combustion efficiency. The heat generated in the combustion process draws in air that allows natural cooling of the chamber to take effect.

**Design Features**

- No visible flame
- Infinite turn down ratio - The design allows biogas combustion without limiting the gas flow range
- No motorized or manual dampers required to bring in combustion air
- Destruction Removal Efficiencies (DRE) in excess of 99% for low NOx and CO emissions
- No refractory lining or insulation required.
- Smaller footprint
- Utilizes the same efficient and reliable 244W flame front technology or pilot ignition
- UL Certified NEMA 4, 4X, and 7 panel
Specifications

The 244E utilizes the same state-of-the-art, pilot ignition system as the 244W. Pilot gas and air are mixed and ignited at ground level, remote from the combustion stack assembly. This controlled method results in a stable pilot flame with an ideal gas-to-air ratio. It is not affected by changes in the biogas flow rate or BTU content.

The unit includes an electronics package that controls pilot gas supply, ignition and monitoring. During the ignition cycle, pilot gas is diverted through the dual pilot lines. One line is referred to as the Continuous Flame line and another smaller pilot line is referred to as the flame or ignition retention line. Air is inspired through venturi(s) installed in either one or both pilot lines. This stoichiometric air/gas mixture is ignited remotely from the combustion stack and generates a flame front that travels to the pilot nozzle tip. The secondary pilot fuel line assists in ensuring that the flame front is not purged, and a pilot flame is established.

The pilot flame continuously burns to ensure efficient combustion of the biogas. Pilot gas only continuously flows through the continuous line when there is a demand to combust biogas. Otherwise, the controls will permit burner operation in a standby mode. No pilot gas is consumed when there is no demand to combust biogas. The ignition system provides for automatic re-ignition in case the pilot is lost. If unsuccessful, an alarm is activated signaling PILOT FLAME FAILURE.

**Burner Inlet Sizes**

3", 4", 6", 8", 10", and 12"

**Burner Capacity**

Please consult the factory for proper sizing of the 244E. Specify maximum waste gas flow rate, gas composition, inlet gas pressure and specific gravity.

**“S” Pilot Ignition System**

**HIGH PRESSURE PILOT GAS**
Natural Gas or Propane
Minimum Supply Pressure: 10 PSIG (70 kPa)
Maximum Supply Pressure: 100 PSIG (700 kPa)
Recommended Pipe Length from Venturi to Continuous Flame Nozzle:
Minimum Distance: 15 feet (5m)
Maximum Distance: 100 feet (30m)

**LOW PRESSURE PILOT GAS**
When available pilot gas pressure is less than 10 PSIG (70 kPa) and greater than 4"WC.

**BLOWER PACKAGE**
Specify when piping layout dictates that the control panel cannot be installed 10 feet horizontal distance from the stack.

**Combusted Gas**

BIOGAS
Primarily methane of low BTU content.

MINIMUM INLET PRESSURE
4" WC (100mm H₂O) at flare inlet manifold.

**Materials**

**COMBUSTION STACK ASSEMBLY**

304 SS

**STACK BURNER BASE & PEDESTAL AND INLET MANIFOLD**
Carbon Steel with 3 - 4mil P-Series TGIC Polyester topcoat powder coating for corrosion resistance
All 304 or 316 SS (Option)

**PILOT GAS NOZZLES**

Continuous Pilot Flame Nozzle: 316 SS
Flame Retention (S & L Ignition System): 316 SS
Ignition (G Ignition System): 316 SS

**VENTURI NOZZLE BURNERS**

347 SS

**THERMOCOUPLE ASSEMBLY**

Type K with inconel sheath and inconel thermowell
A secondary thermocouple can be installed at the combustion stack assembly and temperature recorder exit to monitor stack exit temperature (Optional)

Specifications

CONNECTIONS COMBUSTION STACK ASSEMBLY
The combustion stack assembly mounts on the burner base and is self-supporting. Lugs are provided on the stack for attachment of guy wires where necessary for additional support.

Waste biogas standard connection is an ANSI 150 RF Flange. ANSI 150# FF or DIN Flanges available upon request.

The assembly includes:
- Main combustion stack, Burner manifold, Continuous pilot nozzle, thermocouple, and flame or ignition retention nozzle.

STACK PILOT GAS CONNECTION
“S” and “L” Ignition System
- Continuous Pilot Nozzle - 2” NPT
- Flame Retention Nozzle - ½” NPT

“G” Pilot Ignition System
- Continuous Pilot Nozzle - 2” NPT
- Ignition Line - 1” NPT

PILOT GAS SUPPLY CONNECTION
“S” Pilot Ignition System
- Pilot Fuel Supply - ½” NPT
- Valve & Regulator Panel Connections - Varec Biogas does not supply the pilot gas piping between the valve and regulator panel to the combustion stack.

Continuous Line - Venturi Inlet: ½” NPT
- Venturi Outlet: 2” NPT
- Flame Retention Line - ½” NPT

“G” Pilot Ignition System
- Pilot Fuel Supply - 1” NPT
- Valve & Regulator Panel Connections - Varec Biogas does not supply the pilot gas piping between the valve and regulator panel to the combustion stack.

Continuous Line - 2” NPT
- Flame Retention Line - 1” NPT

“L” Pilot Ignition System
- Pilot Fuel Supply - 1” NPT
- Valve & Regulator Panel Connections - Varec Biogas does not supply the pilot gas piping between the valve and regulator panel to the combustion stack.

Continuous Line - 2” NPT
- Flame Retention Line - ½” NPT

Available Options (Continued)

REMOTE START PRESSURE SWITCH
Option provided when remote automatic pilot ignition is specified and a method of starting and shutting the burner is required through main gas line pressure.
- Range: 4” - 30” (100mm - 750mm) WC
- Pressure Connection: 1/4” NPT
- Switch Rating: 15 amps @125VAC
- Enclosure: NEMA 7, Explosion proof, Class1, Div. 1, Groups C & D
- Deadband: 1.1” (28 mm) W.C.
- Conduit Connection: 3/4” NPT
- Temperature Range: -80° to +180°F (-62°C to +82°C)
- Approvals: UL Recognized, CSA Certified

CONTROL PANEL ENCLOSURE HEATER
This is recommended for outdoor panel installations that have cold weather conditions.
- Rating: 125 watts, 120VAC or 240VAC

REMOTE SPARK GENERATOR
The hi-tension lead wire supplied with the unit is a maximum 10 feet (3m) in length. In cases where the control panel that houses the transformer cannot be located within 10 feet (3m) of the spark plug location, a remote generator can be specified. The transformer is supplied in either a NEMA 4, 4X or 4 & 7 enclosure and located within 10 feet (3m) of the spark plug. This allows an operator to have the control panel installed further away from the burner for improved burner monitoring.

FLASHBACK PROTECTION
It is recommended that suitable flame flashback protection be installed in fuel gas lines supplying any of the 244E Burner systems. Please refer to 5200 Series Product data sheet for information.

Electrical

ENCLOSURE
- NEMA 4, Weatherproof (Standard)
- NEMA 4X, Corrosion Resistant
- 316 Stainless Steel (Optional)
- NEMA 7, Explosion Proof, Aluminum (Optional)

POWER CONSUMPTION
- 10 amps @ 120VAC or 5amps @ 240VAC (50/60 Hz)

AMBIENT TEMPERATURE RATING
- -40°F to +131°F (-40°C to +55°C)

OPERATING MODES
- “MANUAL”, “AUTOMATIC”, “STAND-BY”

FLAME MONITORING
- Thermocouple with individual set point adjustments, pilot lights and alarm relay.

REMOTE ALARM CONTACTS
- One set SPDT dry contacts for pilot on/off status
- One set SPDT dry contacts for pilot flame failure
- Contact rating: Max 2 amps @ 120VAC OR 240VAC (50/60Hz)

PILOT ON/OFF ALARM RESPONSE
- Immediate upon cooling of thermocouple below set point.

Available Options

REMOTE START/STOP SIGNAL INPUT
Option provided when remote automatic pilot ignition is required.
- Contact connections are provided for available plant signal.
- N.O. Dry Contact Closure (Standard) 120VAC or 240VAC input signal (Optional)

REMOTE START TIME DELAY RELAY
- Included when remote start option is supplied.
- Factory Set: Setting Mode D, Unit Mins
- Range: 0-30, factory set 4 minutes
- Function: Prevents system from frequent “ON”/“OFF” cycles (nuisance switching) during pressure fluctuations at remote pressure switch.

Consult factory or your authorized sales representative for ordering information.

**NOTE:**

2. Available option with the 244EG and 244EL.
3. Option can be used for 244ES/EG/EL Systems.
4. Include when specifying a 3-Way Solenoid Valve with the Model 386/440.
5. Always include when specifying an “L” ignition system.
6. Add S4 or S6 at the end of the PN to signify choice of either all 304 SS or all 316 SS for burner base and manifold.
